

FULL CONFIGURATION

FINA ERGEN STARTUP GUIDE

APIs, Pro Services & IoT Networks

1. Visual Configuration: Fina Interface

From version v3.6.0 onwards, Fina prioritizes **visual configuration** from within the app itself.

How to configure?

Open Fina and go to:

Settings > Intelligence Domain > Services & APIs

Fill the forms with your API keys and click **"Save"**.

AI & Language Models

GitHub Token: Used for powerful free models.

Get here: [GitHub Tokens](#)

OpenAI: For images and advanced reasoning.

Get here: [OpenAI API](#)

Weather & News

OpenWeatherMap: Accurate weather reports.

Get here: [OpenWeather API](#)

NewsAPI: Daily news readings.

Get here: [NewsAPI](#)

Gmail Notifications:

Enable "Two-Step Verification" in your Google account and generate an **"App Password"**.

Link: [Google App Passwords](#)

2. Voice Models

A. Listening: Vosk

Download models from [Vosk](#) and place them in `~/.config/Fina/model/`.

B. Speaking: Piper (TTS)

Get `.onnx` files from [Piper](#) and save them in `~/.config/Fina/voice_models/`.

3. Smart Home (IoT)

New: Habitat Panel (V3.6.0)

From **Settings > Habitat** you can now configure the IPs for your newly supported devices:

- **Climate:** Full control and monthly energy reading (kWh) of Air Conditioners.
- **Blinds & Windows:** Bases for motorized blinds and garage doors (e.g. Somfy).
- **Cleaning Robots:** Control & telemetry for Roomba/Roborock.
- **Smart Appliances:** Read freezer/fridge temperatures and diagnostics.
- **Irrigation:** Direct link to your smart sprinklers.

Pro Tip: Room Assignment

When a device is detected, click the **Pencil icon** to assign it to a "Room". This prevents Fina from getting confused if you have multiple TVs.
