FINA ERGEN STARTUP GUIDE

Fina Ergen © 2026

Voice Models, APIs & IoT Domain

🎤 1. Voice Models: The Core of Fina

Fina needs two types of "brains" to talk and listen. While Fina downloads a basic version on first start, for the best experience you should set up high-quality offline models.

A Listen: Vosk Recognition Model

This allows Fina to hear you without an internet connection.

- **Choosing the model:** We recommend the **Large** models (around 1-2GB) for maximum accuracy.
- **Where to download:** Go to [Vosk Models](#).
- **Installation:**
 1. Download the model for your language (e.g., `vosk-model-en-us-0.42`).
 2. Unzip it inside: `~/.config/Fina/model/`
 3. In Fina's Settings, go to **Intelligence Domain > Path Options** and paste the folder path.

B Speak: Piper Speech Model (TTS)

This is how Fina's voice sounds. You can have multiple voices!

- **Downloads:** Get `.onnx` and `.json` files from the [Piper Repository](#).
- **Storage:** Place all voice files in: `~/.config/Fina/voice_models/`
- **Switching:** Once files are there, you can simply tell Fina: "Fina, change your voice".

🖥️ 2. Visual Interface & Connectivity

Everything can be configured directly from the app. No coding skills required for basic setup.

How to configure?

Open Fina and go to:

Settings > Intelligence Domain > Services & APIs

Fill the forms with your API keys and click "**Save**".

AI & Language Models

GitHub Token: Used for powerful free models.

Get here: [GitHub Tokens](#)

OpenAI: For images and advanced reasoning.

Get here: [OpenAI API](#)

Weather & News

OpenWeatherMap: Accurate weather reports.

Get here: [OpenWeather API](#)

NewsAPI: Daily news readings.

Get here: [NewsAPI](#)

Gmail Notifications:

Enable "Two-Step Verification" in your Google account and generate an "**App Password**".

Link: [Google App Passwords](#)

3. Smart Home (IoT)

Fina can control TVs, lights, and AC units by scanning your local network.

Pro Tip: Room Assignment

When a device is detected, click the **Pencil icon** to assign it to a "Room" (e.g., 'Kitchen' or 'Living Room'). This prevents Fina from getting confused if you have multiple TVs.
